Shivang Singh

AI Engineer building GenAI & LLM Systems | Production ML |
Publicis Sapient
Bengaluru, Karnataka, India

Summary

AI Engineer focused on building and scaling GenAI systems in production.

At Publicis Sapient, I work on Bodhi Atomize — a multimodal AI platform that transforms images, videos, and GIFs into structured signals such as text, characters, emotions, and branding elements using large language models and computer vision. The objective is to reduce manual effort and enable reliable enterprise-scale content understanding.

My work sits at the intersection of GenAI systems, computer vision, and production ML engineering. I design and operate pipelines that handle real traffic, where concerns like latency, token limits, retries, backpressure, and system failures matter as much as model quality.

I've built production workflows using Gemini 2.5 Pro, implemented structured outputs with Pydantic, and worked on evaluation frameworks using DeepEval. A significant part of my learning comes from running systems under real-world constraints rather than isolated experimentation.

Previously, I worked on object detection and defect detection systems, improving both accuracy and inference performance across large image datasets.

What I care about:

- Building AI systems that reliably work in production
- Understanding failure modes early and designing for robustness
- Writing clean, scalable ML and backend code
- Learning from real usage patterns, not just research papers

Open to conversations around GenAI systems, LLM infrastructure, ML engineering, and production AI challenges.

Experience

Publicis Sapient

Senior Associate Data Science L1

June 2025 - Present (11 months)

Bengaluru, Karnataka, India

- Worked on Bodhi Atomize, a multimodal GenAI product for enterprise marketing analytics, decomposing 10,000+ image, video, and GIF assets into structured JSON outputs for large clients like Eli Lilly.
- Built and productionized LLM pipelines using Gemini 2.5 Pro, handling multiple parallel calls per asset with structured outputs using Pydantic
- Designed systems to handle high-concurrency and burst traffic, implementing retry strategies with exponential backoff, token budgeting, and backpressure to manage rate-limit failures
- Achieved ~95% reduction in manual analysis time (from hours to ~2 minutes per asset)

Integrated computer vision + LLM workflows using YOLO, PaddleOCR, and LLM reasoning to extract 50+ structured components per asset

- Used DeepEval to evaluate correctness and consistency of LLM outputs, improving reliability for production use
- Built and deployed FastAPI-based microservices, working with Redis, Celery, and Kubernetes (KEDA autoscaling) to support 1,000+ concurrent requests with low latency

Lincode India

9 months

Data Science Trainee

April 2025 - June 2025 (3 months)

Bengaluru, Karnataka, India

Data Science Intern

October 2024 - March 2025 (6 months)

Bengaluru, Karnataka, India

Omdena

Junior Machine Learning Engineer

May 2024 - August 2024 (4 months)

- Led the supervised modelling team in predicting urban farming zones in Milan using geospatial data.

- Engineered an XGBoost model with 93.68% accuracy for urban farming predictions.
- Conducted EDA on 106,000 rows of geospatial data using the Geopandas library to identify suitable farming areas.
- Implemented real-time predictions for urban farming zones, optimizing data handling and model efficiency.
